

Hogia Instant Activate

Instant Activate allows you to quickly change and increase capacity in public transport – and immediately inform passengers.

Use Hogia Instant Activate to quickly avert disruptions in public transport. Regardless of whether a situation is planned or unforeseen, you can quickly activate extra services to help passengers safely reach their destination. All the capacity changes you make are instantly visible to passengers in your established communication channels.

Situations are continuously arising that affect the planned traffic. Some situations may only affect a specific route, while others can have broader consequences. As a traffic planner, it is invaluable to be able to act swiftly to minimise passenger inconvenience.

Hogia Instant Activate offers you a range of possible measures to take. The user-friendly interface gives you a full overview of which services you can order, and you can easily filter amongst the content to find what you need. You can activate planned alternative routes in the event of brief or longer disruptions. Or you can add extra capacity, for instance by reinforcing an existing service or adding extra services. It also allows you to add replacement services for trains in the event of either planned or unplanned disruptions. All in a few simple clicks. The changes are promptly and reliably communicated to passengers in your established communication channels.

Hogia Instant Activate

Having Instant Activate in your organisation makes it more meaningful to work proactively. Commonly occurring disruptions can swiftly be averted with planned measures and easy activation. The tool is fully cloud-based and platform-independent, making it easy to integrate into your existing planning system.

Use Hogia Instant Activate to:

- ✓ Activate alternative services and routes
- ✓ Easily see all the options available to you
- ✓ Quickly inform passengers of traffic changes
- ✓ Set user permissions so that orders can only be placed by authorised users

HOGIA INSTANT ACTIVATE

– part of Hogia's family of products for more efficient public transport

Hogia's Instant product family sets a new standard for the monitoring and management of public transport. These cloud-based platform-independent products can be mixed and matched to your needs, and together they create a complete tool under a common interface.

Instant Situation – *register events that affect public transport and gain a complete overview of the situation*

Instant View – *see a real-time overview of the public transport network*

Instant Activate – *quickly activate alternative services when needed*
