Hogia Terminal API

Whilst embracing innovation now and for the future, it is also as important to have a solution based on proven technology that will continue to evolve as industry trends and technology changes. By providing an Application Programming Interface (API) solution, built on Microsoft's latest .Net platform, we can offer you an agile and extendable product, Hogia Terminal API, with well documented interfaces that allow you to optimise your business processes, business performance and business agility.

The utilisation of Hogia Terminal API allows you to create real-time integrations with the systems used by your stakeholders such as hauliers, customers, customs and border authorities, shipping companies and so on. Moreover, it gives you the possibility to design and implement new services and functions that perfectly match your organisation´s needs and demands.

A few samples of what you can achieve with Hogia Terminal API:

Bookings

Allow your customers to manage their own bookings through the Hogia Terminal API.

Notification

Did you know that it is possible to notify stakeholders in real-time via Hogia Terminal API?

Dangerous goods

Provide essential information about all units with dangerous goods on your Terminal to stakeholders.

Order weighing

Allow your customers to order weighing of units (Verified Gross Mass).

Pre-advise

Give your hauliers possibility to pre-advise their truck drivers for an efficient visit to your Terminal.
